

User Story 2: Player Information

As a user who has searched up a player, I also want to be able to see the information about that player concerning the game below the song recommendations. I would like to see the statistics of their last 10 matches and their performance in those games. Along with this, I would like to see the details about the match, such as the specific game mode, how long each game lasted, and whether the match ended in victory or defeat for the player I searched up. I also want to be able to see the player's current rank. This should all be displayed neatly in one page. With this aggregate information I will be able to confirm that the player the webapp is looking at is the player that I intended, and get a general sense of the energy levels of the recommended songs.
