

User Story 1: Song Recommendations

As a user, I want to be able to search up a player's account by their in-game name and region, and based on their recent matches be presented with a list of songs from Spotify that reflect their recent matches. For example, if the player I searched is on a long winning streak, the songs will be calmer, whereas if the player is instead on a long losing streak, the songs should generally be more dynamic and higher energy. This way, I can input my own game account and be presented with songs to listen to for my next game, pushing me harder to win if I have been losing, while setting a calmer atmosphere for the game if I have been winning. Not only that, I would also be able to generate a song list for anyone such as friends.
